

Docmosis Torando v2.1 Release Notes

Nov 2015

Docmosis core updated from version 4.0.1 to 4.0.2

Tornado Changes

#	Change
1	The release has been updated to a ZIP file containing various materials including the program, documentation and license information.
2	GUI improvements for Tornado console: <ul style="list-style-type: none">- Feedback when render is executing- When admin password is set, session expiration now redirects to login page- XML Sample Data creation no longer produces duplicate “keys”
3	Added command line settings for control over logging: <ul style="list-style-type: none">- <code>log.level=debug info error</code> to specify the level of logging to the console and log files- <code>log4j.config.file=path</code> to set the log4j logging configuration file- <code>java.util.logging.config.file=path</code> to set Java Util logging configuration file

Web Service API Changes

#	Change
1	<no changes>

New Core Engine Features

#	Change
	<no changes>

Bug Fixes / Technical Changes

#	Change
1	Fixed issue where session expiry would give unhelpful error if admin password is configured. Now automatically redirects to login.
2	Much logging has been moved to debug level so the default info level logging is more succinct.
3	Http caching disabled for Tornado console to aid with browser cache related problems.
4	Fixed bug stopping the restart button from being enabled.
5	Render now always uses <code>localhost</code> to execute the render rather than non-deterministically choosing a local address to use.
